October 2025 Residential Real Estate Market Report *Windsor/Essex County*

The October 2025 residential real estate market statistics are now in from WECAR (The Windsor/Essex County Association of Realtors). Average price is down, listings are way up and sales are down slightly year over year. Let's take a closer look!

The average sale price for October 2025 was \$566,233 which is down -3.12% from this time last year and also down -4.03% from last month. Listings in October were up once again at 1,253 which is a +20.48% increase compared to a year ago but down -0.72% compared to last month. Sales were down at 461 which is a -2.33% decrease compared to a year ago but up +21% from last month.

Average days on market was at 19 days in October which is down slightly from 20 days in September. Months of inventory came in at 3.9 months (down from last month's 4.7 months). This metric indicates that we are in a **"Seller's Market"**. The Sales to New Listings Ratio (SNLR) came in at 38.7% (up from last month's 33%). This metric indicates that we remain currently in a **"Buyer's Market"**). How can it be a Buyer's and a Seller's Market at the same time? In essence, these two metrics offer complementary perspectives on the real estate market. While months of inventory provides a snapshot of the overall supply situation, the sales to new listings ratio gives a more immediate indication of current market demand.

Current headlines: The BoC interest rate announcement on October 29th resulted in the BoC dropping the target rate to 2.25% (25-basis point reduction). Inflation increased in September from 1.9% to 2.4%. Windsor continues to have the highest unemployment rate in the Country at 10.4% (decreasing from 11.1% last month but still highest in the Country). The Federal Government has introduced legislation to remove the 5% GST portion on new homes for first-time Buyers up to \$1 million and the Province of Ontario is proposing to rebate the 8% PST portion essentially giving first-time buyers a combined savings of up to \$135,000!

Final thought: With September having been a slow start to our Fall market in terms of sales volume, October rebounded with considerably more sales (21% more) and slightly less listings than the previous month however average sale price dipped back to August figures. If we look at October specifically, we've had a relatively consistent average price since 2021.

Keep in mind that market conditions vary greatly depending on what price point you are in etc. so it's never been more important to hire a REALTOR® who understands the market and can offer you the best advice possible! Take care!

New Listings and Sales - Past 12 months

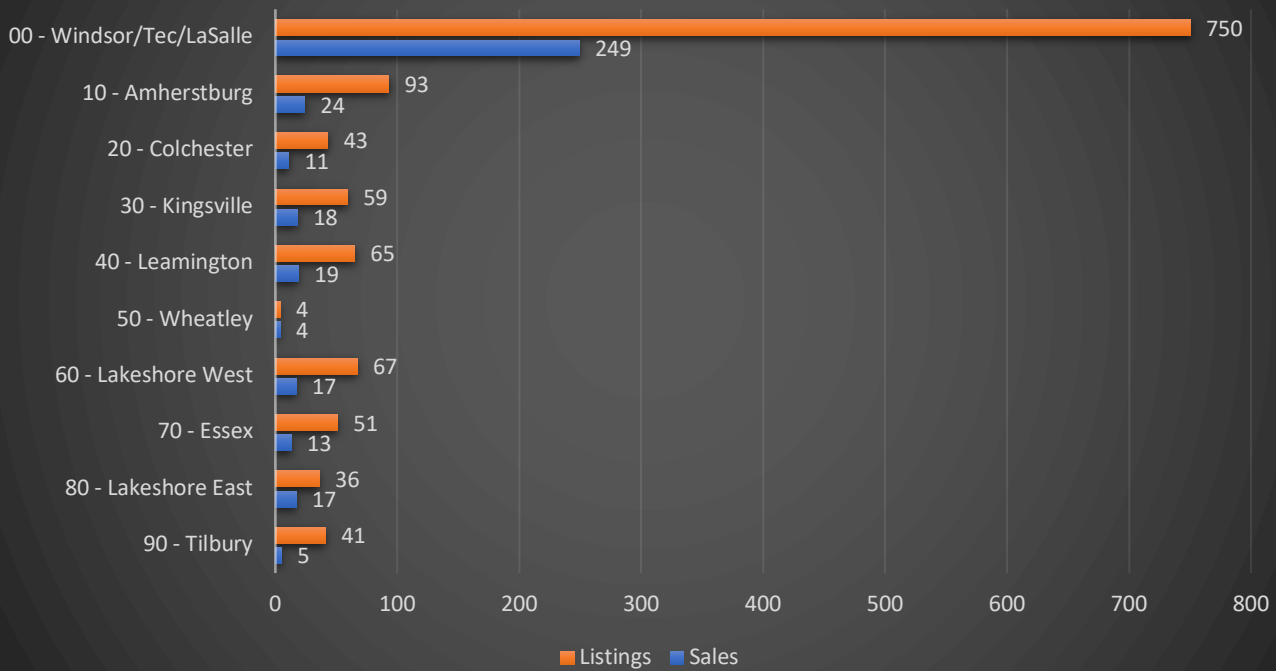

By breaking down the local real estate monthly sales data by price category, we can see the activity level of each segment. This provides valuable insight into how busy your particular segment has been and to help anticipate the amount of expect activity in the near future.

Sales by Geographic Area in Essex County

#1

Bungalow

Sales: 107
Average price. \$521,194

#2

Ranch

Sales: 73
Average price. \$646,610

#3

1.5 storey

Sales: 61
Average price. \$437,716

#4

2 Storey

Sales: 58
Average price. \$709,850

#5

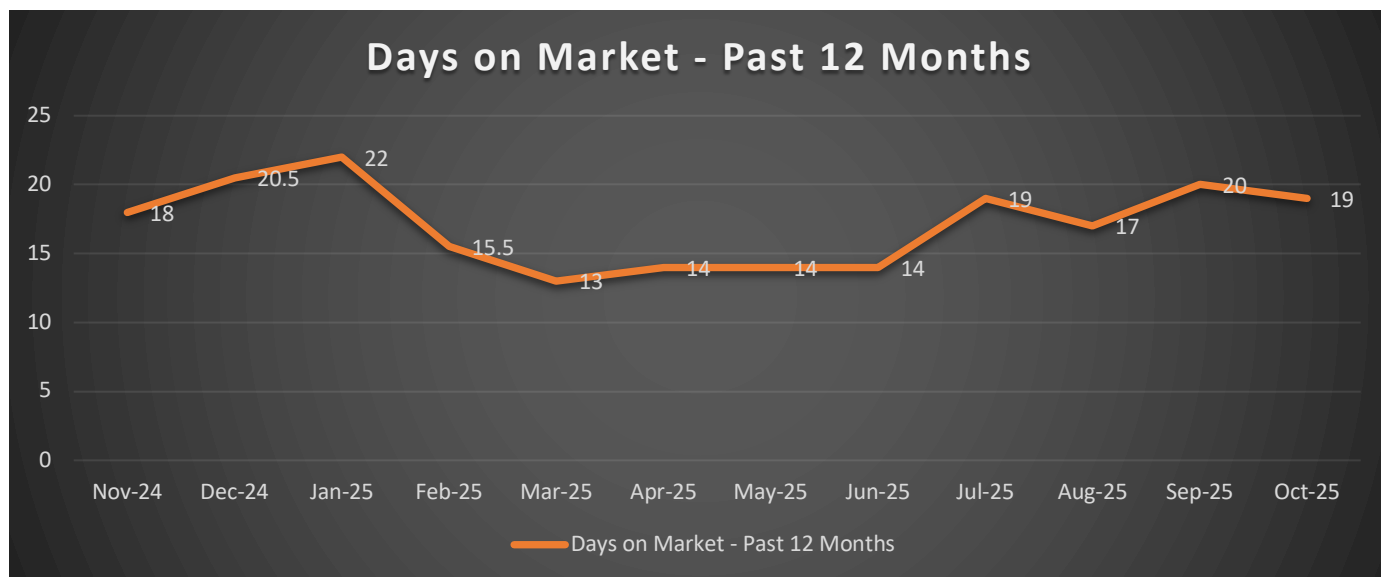

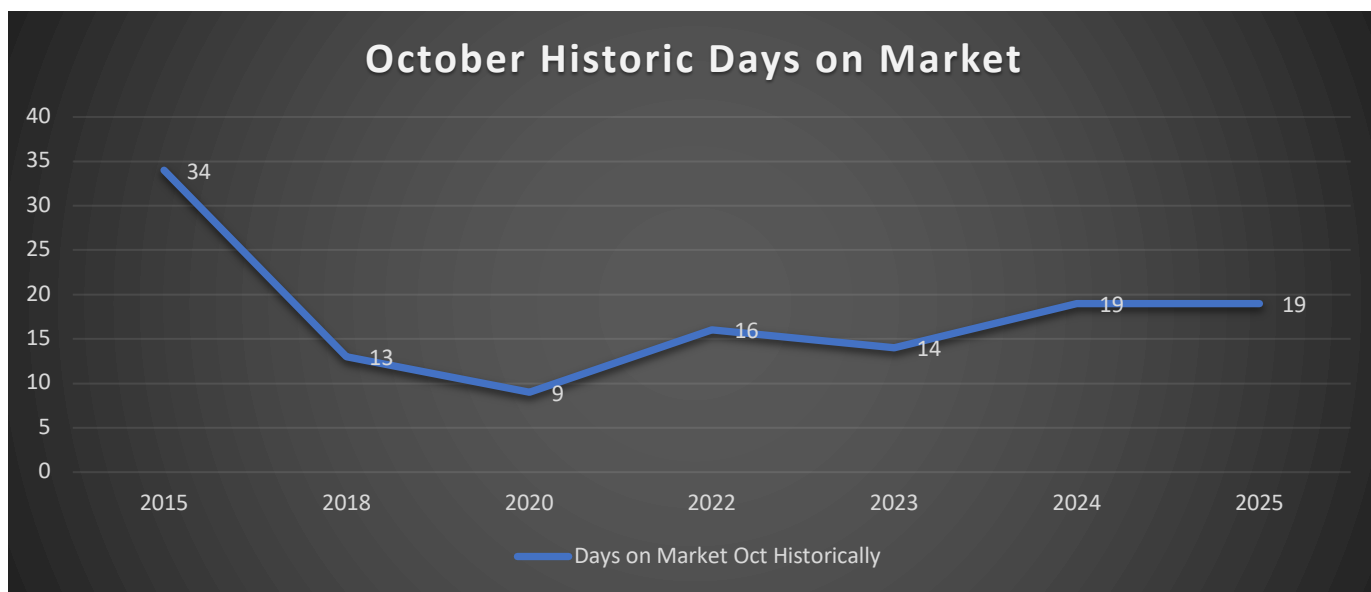

Raised-Ranch

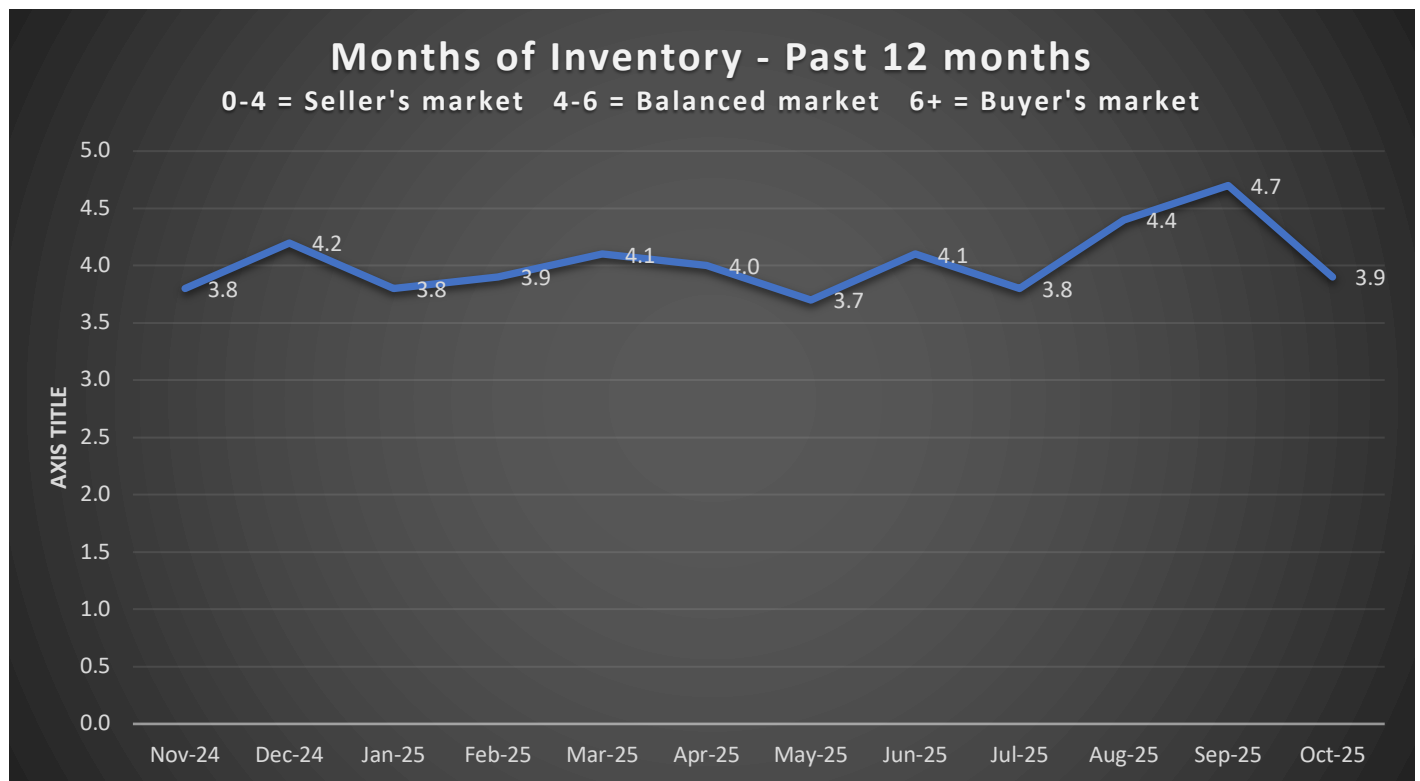

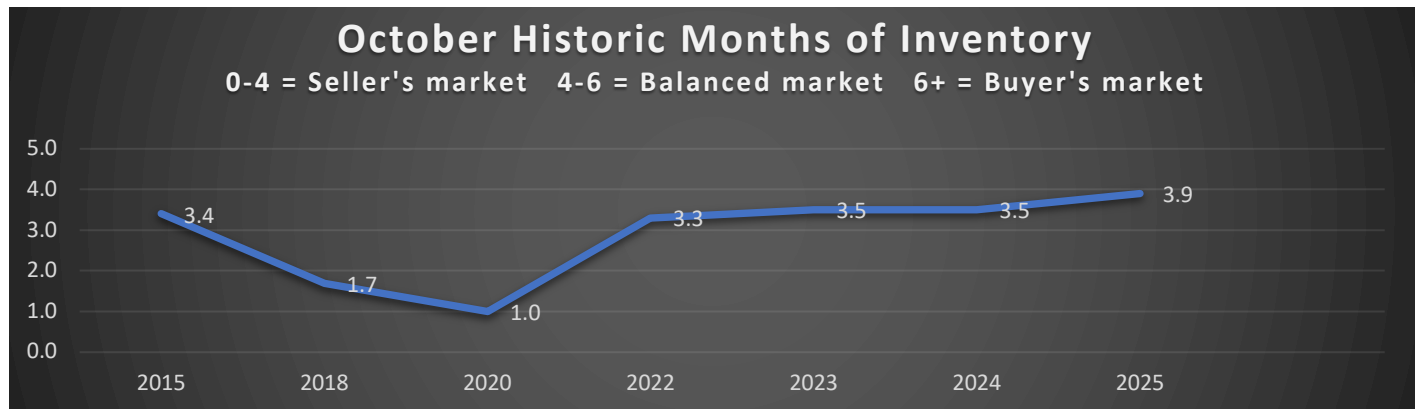

Sales: 41
Average price. \$594,220

Days on Market or "DOM" is a crucial statistic used to understand real estate activity in a particular area.

DOM measures the number of days between a property's initial listing and the date it either sold or was taken off the market. A decreasing DOM means a market becomes more competitive (like in a Seller's market), while the opposite is true with an increasing DOM (like in a Buyer's market). It is used to compare locations and also to predict trends.

The Months of Inventory metric tells us how many months it would take for all the current homes for sale on the market to sell, given a monthly sales volume. Four to five months of supply is average. A lower number means that Buyers are dominating the market and there are relatively few Sellers; a higher number means there are more Sellers than Buyers.

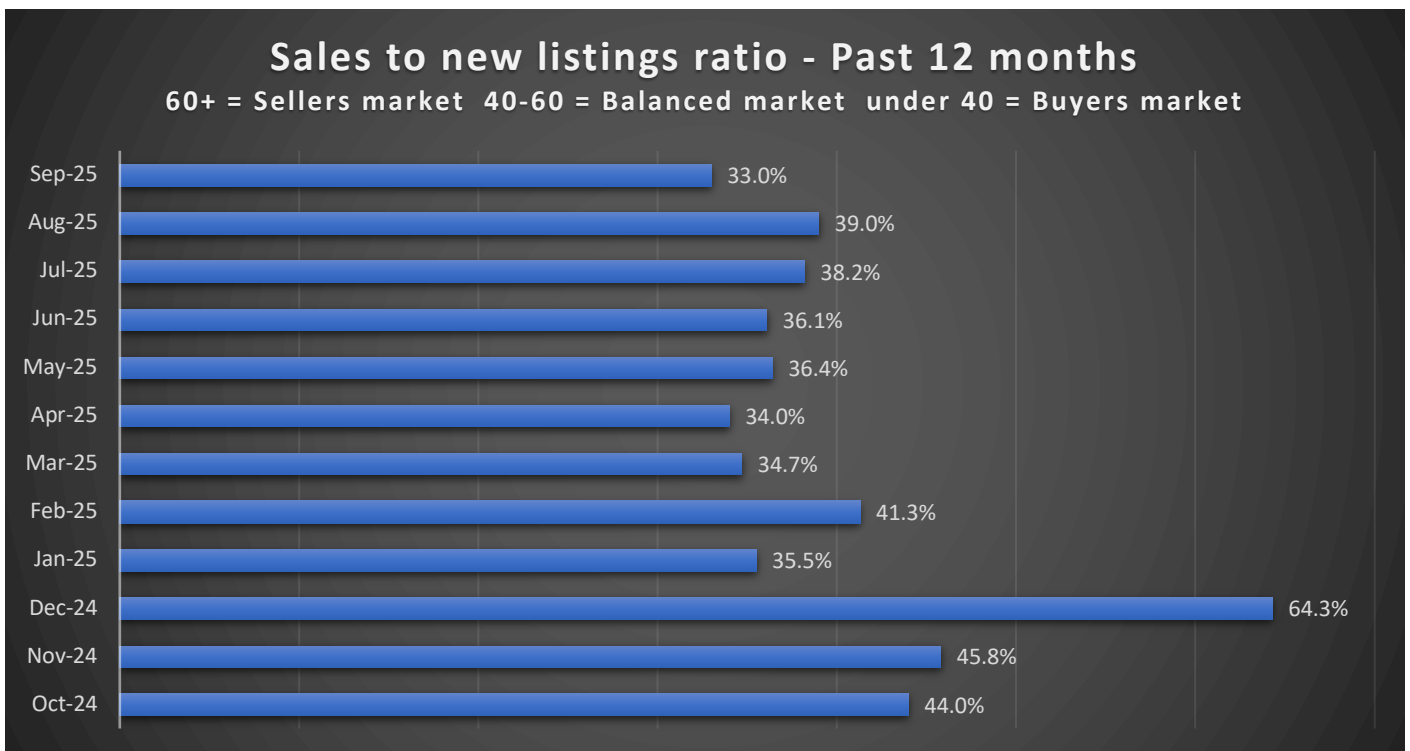

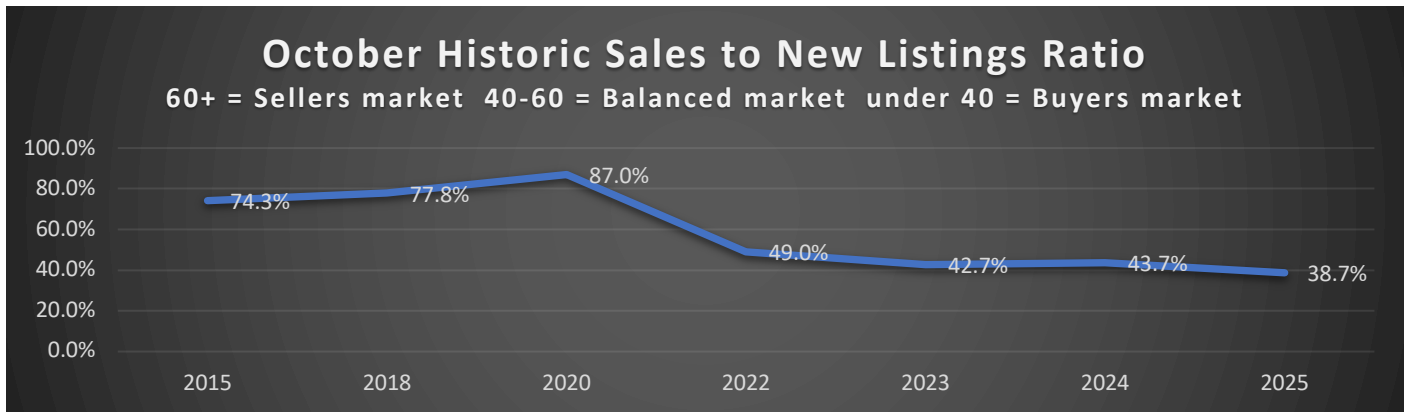

The Sales-to-New-Listings Ratio (SNLR) is used to measure the balance of supply and demand in a housing market, with higher percentages above 60% indicating a seller's market and lower percentages below 40% showing a buyer's market.

SNLR is calculated by dividing the number of homes sold in a period by the total number of new listings added to the market, multiplied by 100 to get a percentage.

In a buyer's market, there is an oversupply of homes relative to demand which can lead to lower home prices and increased negotiating power for buyers.

In a seller's market, high demand and low supply lead to more buyers competing for fewer homes, increased home prices, and sellers having more control over negotiations.
